

ezPyro™ SMD I²C Pyroelectric Infrared Flame Sensor

Introduction

The Broadcom® ezPyro™ thin film digital pyroelectric IR sensors for flame detection combine high-quality sensors with a high level of configurable electronic integration in a small SMD package. High sensitivity combined with fast response times ensure rapid and accurate flame detection. The high dynamic range allows detection of small and large flames, nearby or over larger distances. These sensors integrate a digital, current mode read-out offering high responsivity over the full frequency range of the flame flicker (3 to 30 Hz). Programmable gain and filtering offer maximum flexibility in system design. Industry-standard I²C communication enables plug-and-play connectivity to microcontrollers and allows easy tuning and calibration. These sensors are very stable over time, ensuring a long and maintenance-free operational lifespan. Various optical filter options are available. These sensors can also be daisy-chained to allow synchronized sampling across devices and offer various low-power modes.
